Let A be a priority queue for maintaining a set of elements. Suppose A is implemented using a max-heap data structure. The operation $\text{EXTRACT-MAX}(A)$ extracts and deletes the maximum element from A . The operation $\text{INSERT}(A, \text{key})$ inserts a new element key in A . The properties of a max-heap are preserved at the end of each of these operations. When A contains n elements, which one of the following statements about the worst case running time of these two operations is TRUE?

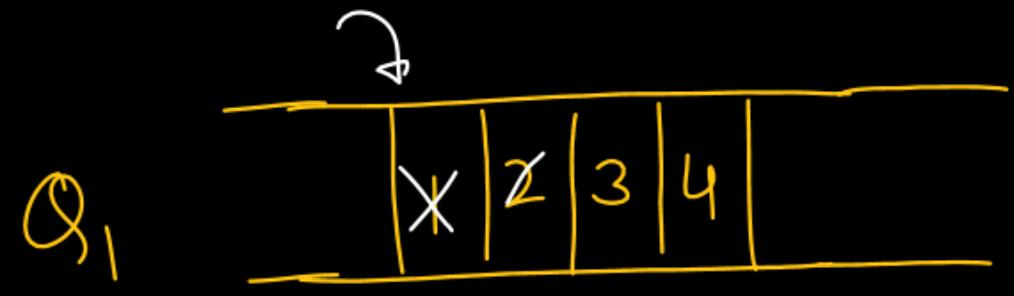

[GATE-2023-CS: 2M]

- A Both $\text{EXTRACT-MAX}(A)$ and $\text{INSERT}(A, \text{key})$ run in $O(1)$.
- B Both $\text{EXTRACT-MAX}(A)$ and $\text{INSERT}(A, \text{key})$ run in $O(\log(n))$.

MCQ

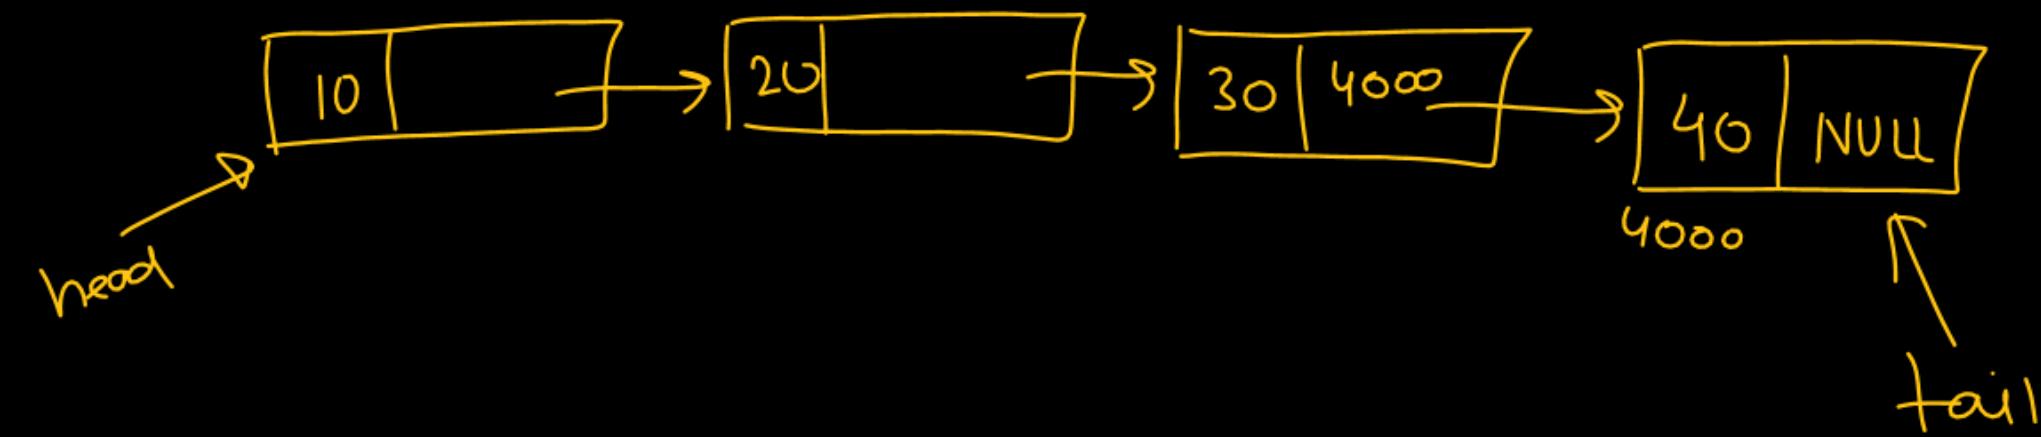

A queue is implemented using a non-circular singly linked list. The queue has a head pointer and tail pointer, as shown in the figure. Let n denote of number of nodes in the queue. Let 'enqueue' be implemented by inserting a new node at the head and 'dequeue' be implemented by deletion of a node from the tail.

Which one of the following is the time complexity of the most time-efficient implementation of enqueue and dequeue, respectively, for this data structure?

[GATE-2018 - CS: 1M]

- A $\theta(1), \theta(1)$
- B $\theta(1), \theta(n)$
- C $\theta(n), \theta(1)$
- D $\theta(n), \theta(n)$

MCQ

A circular queue has been implemented using a singly linked list where each node consists of a value and a single pointer pointing to the next node. We maintain exactly two external pointers FRONT and REAR pointing to the front node and the rear node of the queue, respectively. Which of the following statements is/are CORRECT for such a circular queue, so that insertion and deletion operations can be performed in $O(1)$ time?

- I. Next pointer of front node points to the rear node.
- II. Next pointer of rear node points to the front node

MCQ

Suppose a stack implementation supports an instruction REVERSE, which reverses the order of elements on the stack, in addition to the PUSH and POP instructions. Which one of the following statements is TRUE with respect to this modified stack?

[GATE-2014 - CS: 2M]

- A A queue cannot be implemented using this stack.
- B A queue can be implemented where ENQUEUE takes a single instruction and DEQUEUE takes sequence of two instructions.
- C A queue can be implemented where ENQUEUE takes a sequence of three instructions and DEQUEUE takes a single instruction
- D A queue can be implemented where both ENQUEUE and DEQUEUE take a single instruction each.

MCQ

Consider the following operation along with Enqueue and Dequeue operations on queues, where k is a global parameter.
